

collections

overnview

- **List** is an ordered collection with access to elements by indices – integer numbers that reflect their position. Elements can occur more than once in a list.

- **Set** is a collection of unique elements. It reflects the mathematical abstraction of set: a group of objects without repetitions. Generally, the order of set elements has no significance.

- **Map** (or dictionary) is a set of key-value pairs. Keys are unique, and each of them maps to exactly one value. The values can be duplicates.
